

# SITRANS SCM IQ Smart Condition Monitoring

SCM IQ is an easy retrofit Siemens smart condition monitoring system for mechanical equipment, using AI and anomaly detection to prevent downtime before it occurs.

PowTechnology integrates & commissions Siemens instrumentation, including the SCM IQ smart condition monitoring system for equipment like pumps, compressors, gearboxes, combustion engines, extractors & mixers.

- Low investment/operating costs
- Easy retrofit installation
- Scalable technology
- Eliminate breakdowns
- Minimise disruption/maintenance costs

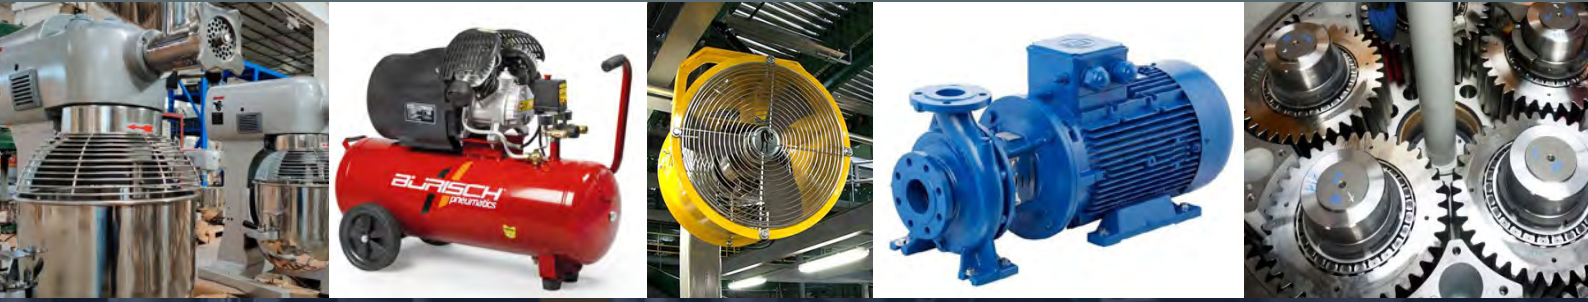

**Return on investment can be under 3 months, whether you have a single application or install this smart condition monitoring solution across your entire plant.**

PowTechnology deliver the whole package:

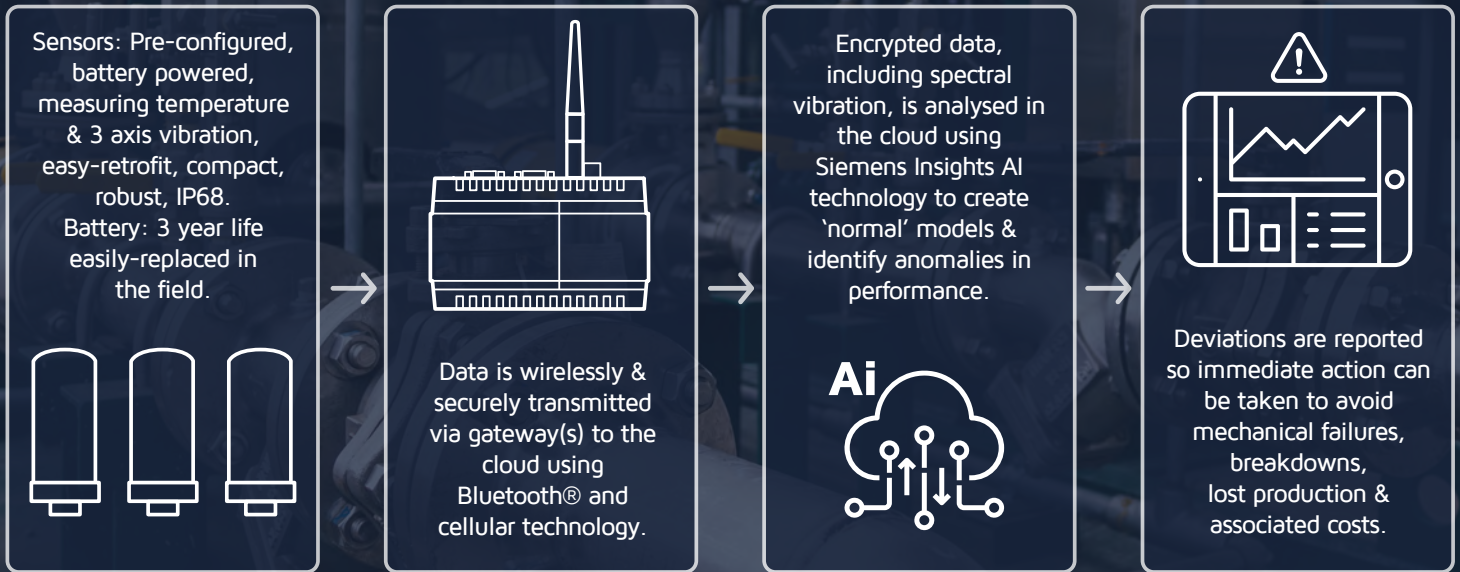

- Preconfigured, easy-install sensors
- All installation parts: panel, power, ancillaries
- Connectivity and log-ins to see data/ analyses

## How Does The SITRANS SCM IQ System Work?

PowTechnology provides a bespoke solution incorporating everything you need for a simple, retrofit IIoT system and instant data.

PowTechnology offers over 30 years of expertise & practical experience in instrumentation, communications & software, delivering IIoT solutions globally.

We provide digital transformation solutions, integrating our own robust IIoT hardware & software with trusted third-party instrumentation & IIoT technologies, which can be customised to meet specific needs.

As a Siemens Solution Partner, we deliver connected solutions into multiple sectors integrating Siemens process instruments and digital products.

PowTechnology help customers lower operational costs, monitor the condition of essential kit to prevent breakdown, maximise resource, comply with legislation, introduce new revenue streams, improve service and differentiate themselves.

We have extensive use cases and testimonials. How can we help you?
