

“This IoT solution offers an ideal balance between affordability and functionality for our application. It was easy to install and is user-friendly.”

JOHN HUGHES
Klass Oil Operations
Manager

“The kit is reliable and affordable and the technical support is great. Our customers keep coming back for more!”

PEADAR MARKEY
Permark MD

The task

Permark supply fuel management systems, pump units, fuel storage and dispensing technology. Klass Oil supply fuels to many Irish homes and businesses. They wanted to standardise stock monitoring and ordering for fuel storage tanks across their six depots.

The solution

PowTechnology proprietary Metron hardware and MetronView software was installed on depot tanks, delivering regular, reliable level data and low level alerts, which prompt centralised stock ordering. Initial installations on SFGO, kerosene and road diesel in the first depot proved the technology, prior to rollout.

The result

Advanced warning of low stock levels at Klass Oil depots makes it easier to plan their bulk haulage delivery schedule. Run-outs are eliminated along with expensive emergency fuel deliveries and the risk of having an idle fleet and frustrated customers.

Summary

- | Centralised stock ordering
- | No run-outs
- | Efficient logistics
- | Improved service
- | Reduced costs
